Curriculum Vitae

Education

PhD, Economics, Arizona State University, 2017

Master, Economics, Simon Fraser University, 2013

MBA, Sharif University, 2012

Industrial Engineering, IUST, 2009

Biography

Pedram Jahangiry, PhD, CFA, is an assistant professor in the Economics and Finance Department of the Jon M. Huntsman School of Business at Utah State University. Prior to joining the Huntsman School in 2018, Pedram was a research associate within Financial Modeling Group at BlackRock NYC. His research is involved in machine learning applications in finance, empirical asset pricing, and factor models.

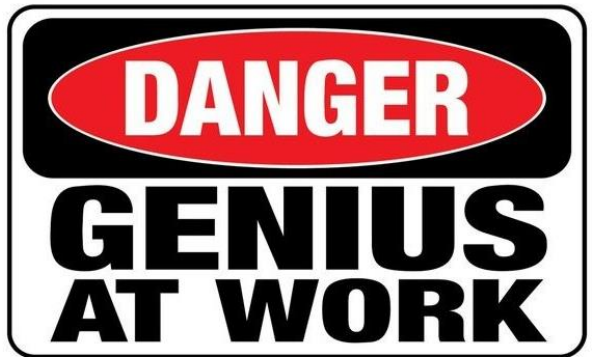
Meet the TAs!

Sarah Bennett

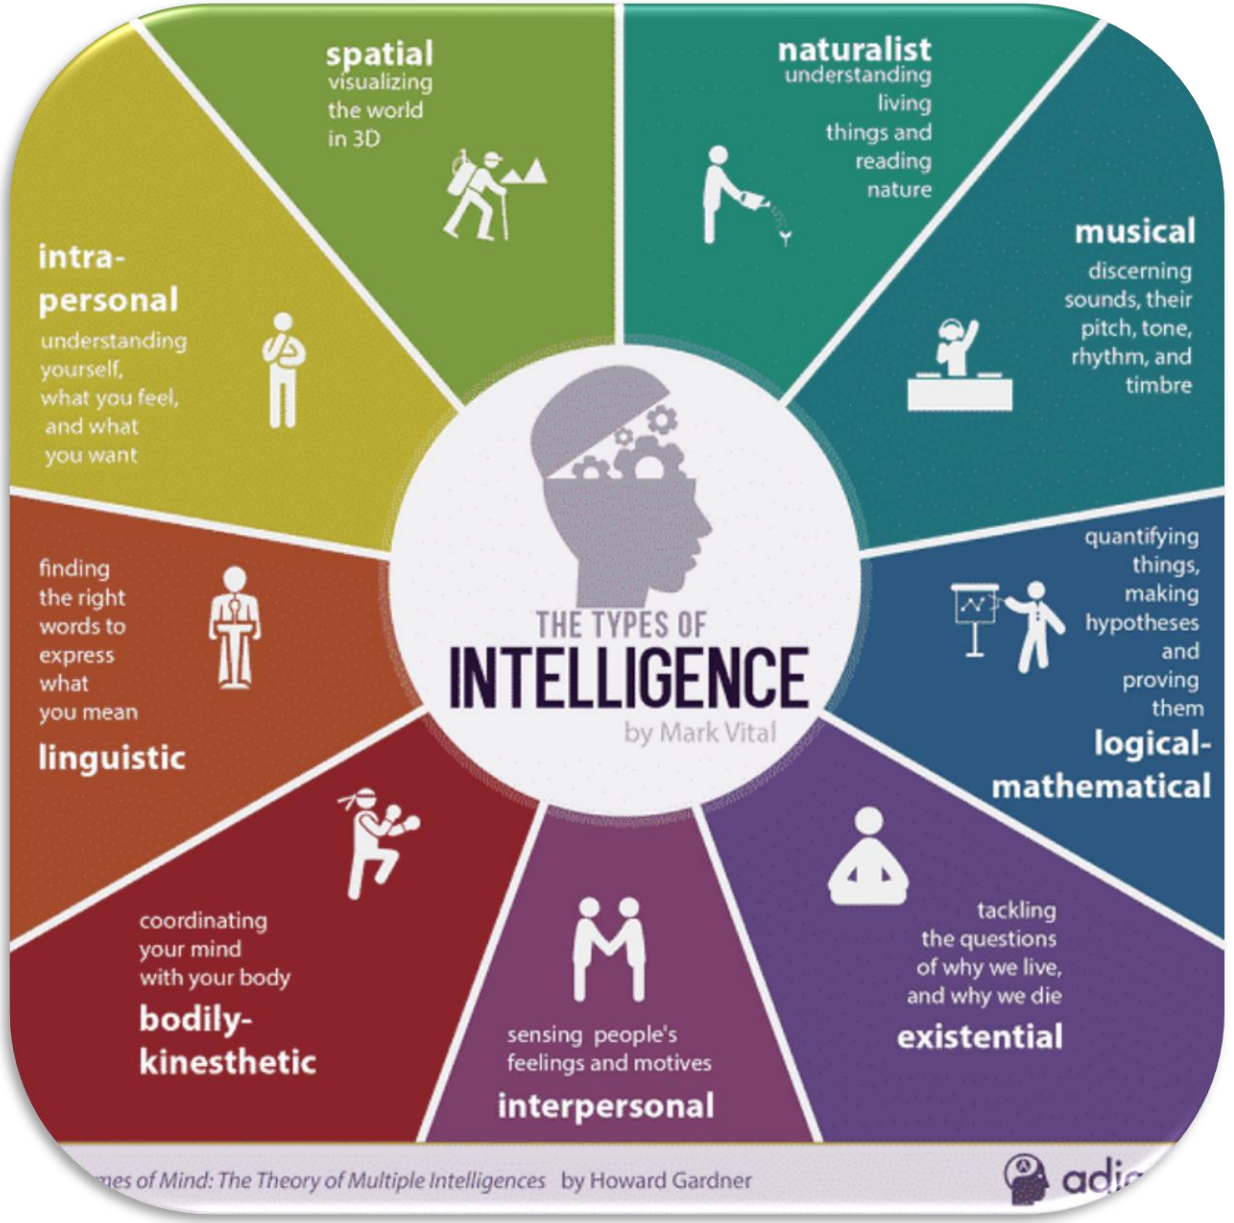
Grayson Felt

Who YOU are!

HELLO
my name is
AWESOME

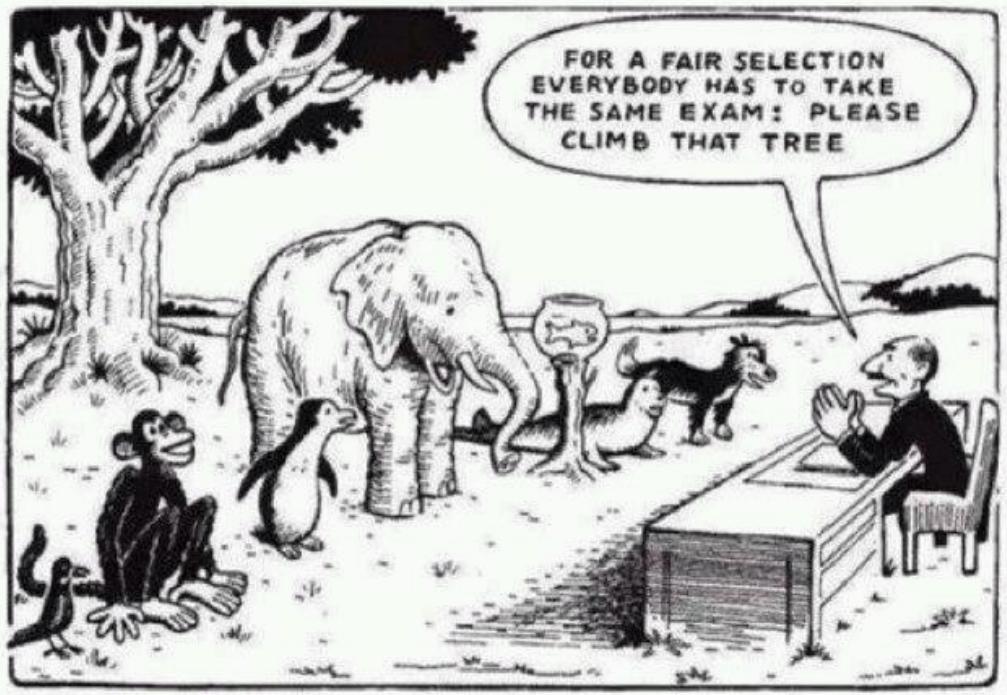


DANGER
GENIUS
AT WORK

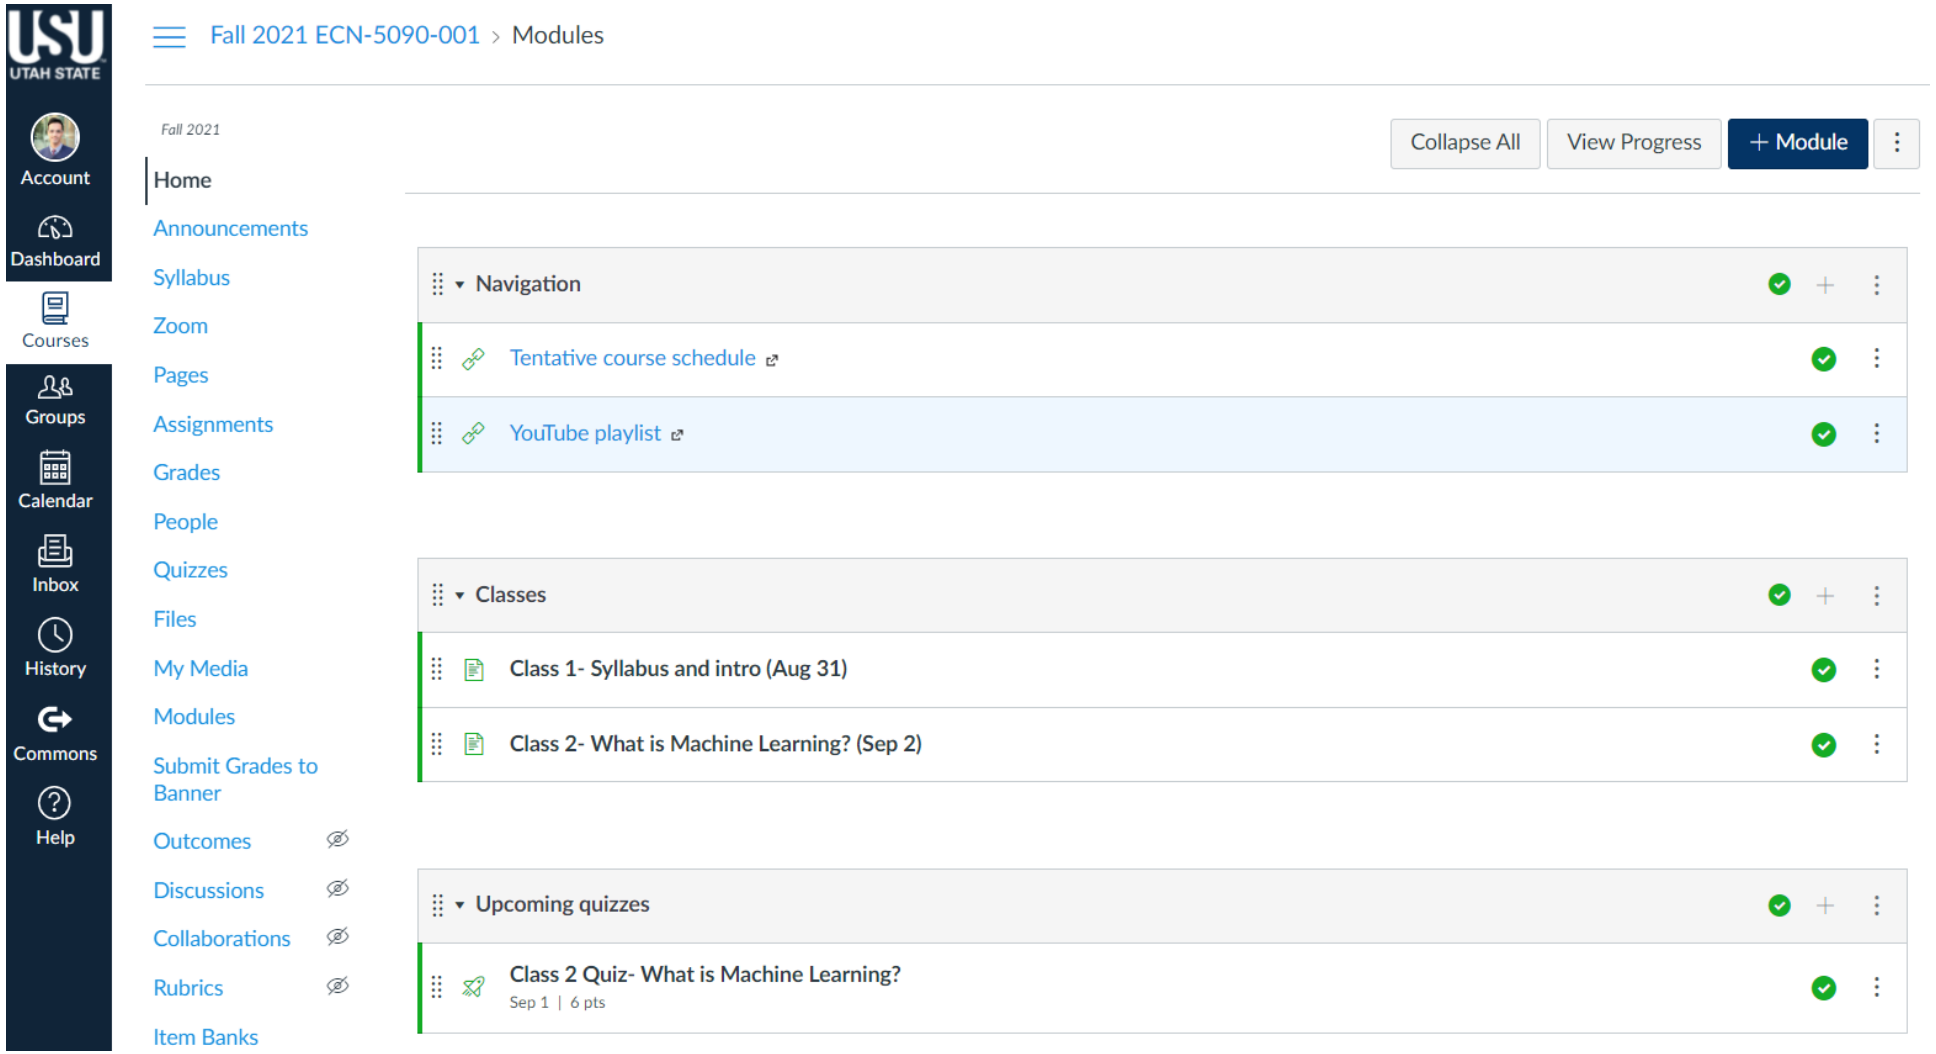


spatial
visualizing the world in 3D
naturalist
understanding living things and reading nature
musical
discerning sounds, their pitch, tone, rhythm, and timbre
intra-personal
understanding yourself, what you feel, and what you want
THE TYPES OF
INTELLIGENCE
by Mark Vital
quantifying things, making hypotheses and proving them
logical-mathematical
finding the right words to express what you mean
linguistic
coordinating your mind with your body
bodily-kinesthetic
sensing people's feelings and motives
interpersonal
tackling the questions of why we live, and why we die
existential
Howard Gardner

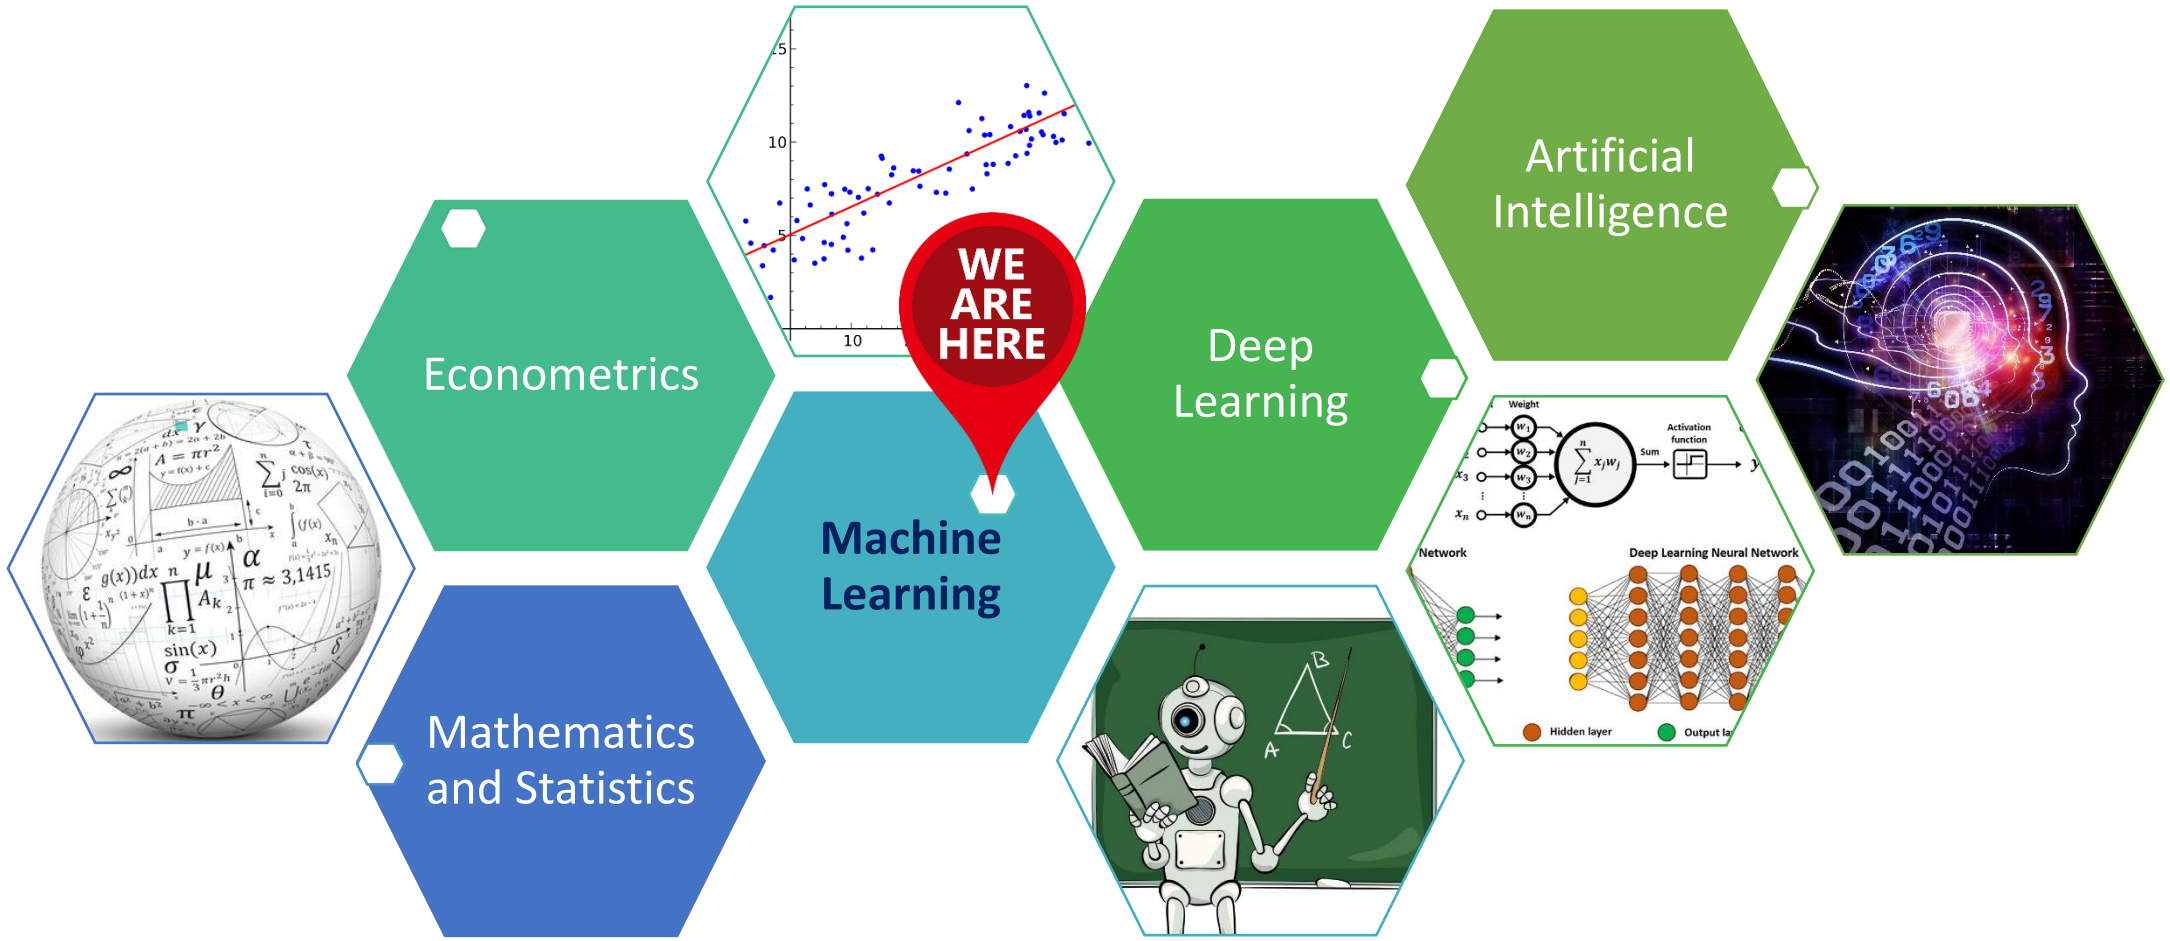
My Teaching Philosophy



What's on Canvas?



Where we are?



Econometrics
WE ARE HERE
Machine Learning
Deep Learning
Artificial Intelligence
Mathematics and Statistics
Weight
Activation function
Sum
Network
Deep Learning Neural Network
Hidden layer

Big picture: Econometrics vs Machine Learning

What are we trying to do as a researcher?

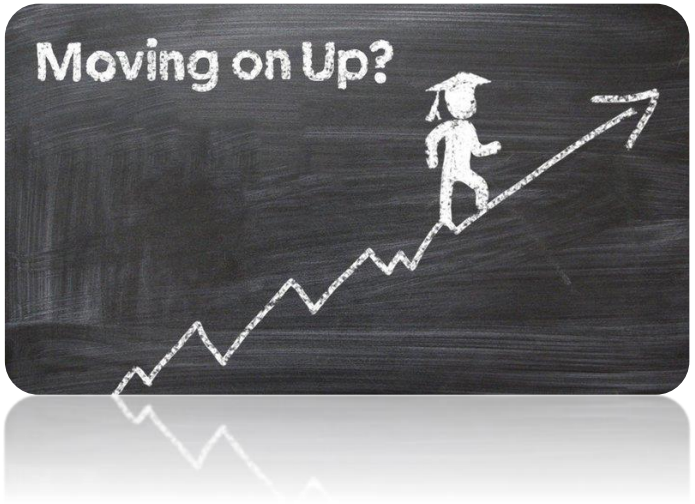
Solve real world problems, right?

Is there a theory?

What is the relationship between

- Sales and advertisement / R&D expenditure / seasonality / industry / … ?
- Quantity demanded and price / income / technology / price of competitors / … ?
- Wage and education/ age/ gender/ experience/ …?

A simple example



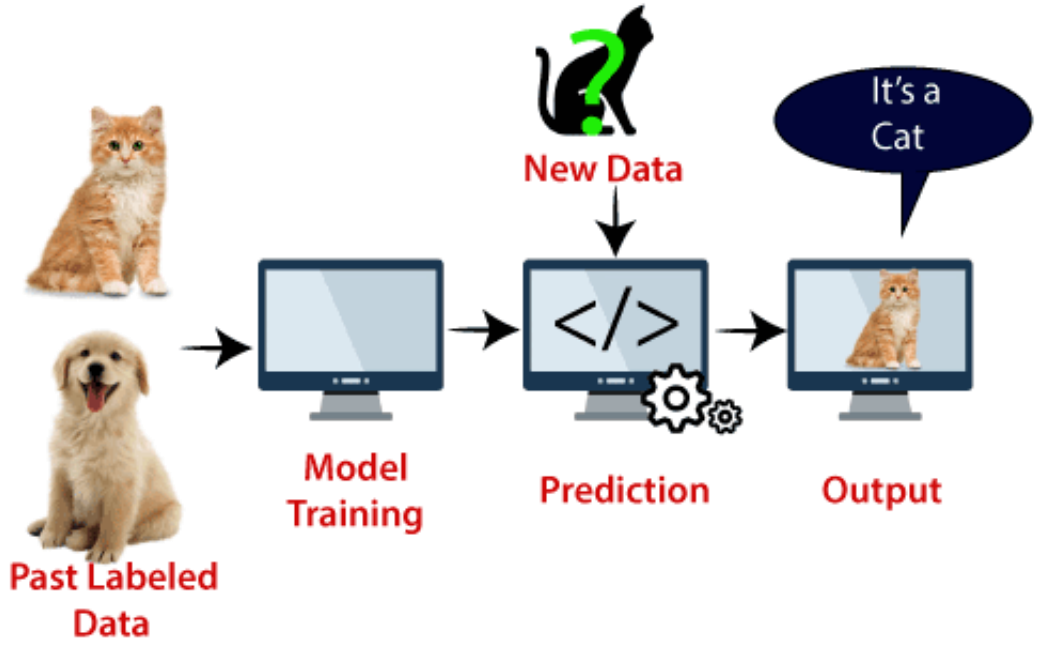
- Let's see if we can predict your future salary! (is there a theory?)
- What are the drivers:
  - Education, age, experience, IQ, …
  - Ethnicity, race, gender, …
  - Industry, location, working hours, …
- Let's build a model (assuming a linear functional form!)

$$wage = \beta_0 + \beta_1 educ + \beta_2 age + \beta_3 exper + \beta_4 IQ + \cdots + \beta_k hours + u$$

- Can you **interpret** this model? Do you care about the interpretability?
- Can you make **predictions** using your model?
- Can you make this functional form more flexible? What are the caveats?

A different example

- Cat vs dog classification problem (image recognition)



- Do you really care about interpretability of the model here?
- What about accuracy of your predictions?

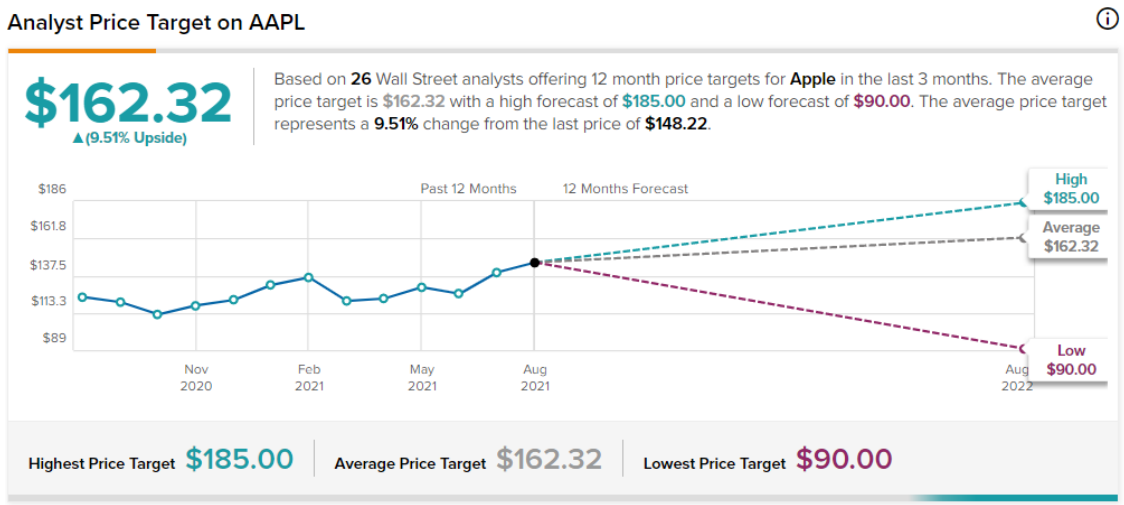
Statistical learning vs machine learning

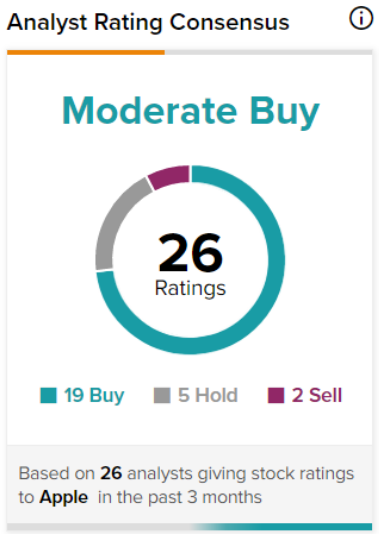
	Statistical Learning	**Machine Learning**
Focus	Hypothesis testing & interpretability	Predictive accuracy
Driver	Math, theory, hypothesis	Fitting data
Data size	Any reasonable set	Big data
Data type	Structured	Structured, unstructured, semi-structured
Dimensions / scalability	Mostly low dimensional data	High dimensional data
Model choice	Parameter significance & in-sample goodness of fit	Cross-validation of predictive accuracy on partitions of data
Interpretability	High	Low
Strength	Understand **causal** relationship & behavior	Prediction (forecasting and nowcasting)

A more complex example

Apple stock price prediction

- What are the classical drivers:
  - Company's fundamentals (balance sheet, income statement, cash flow statement)
  - Competitors (comparing multiples)
  - Technical analysis!
  - Seasonality (holidays, months, days, …)





What else?

- Market sentiment (news, tweets, blogger opinions, conference calls, …)
- Satellite images from Apple store parking lots!

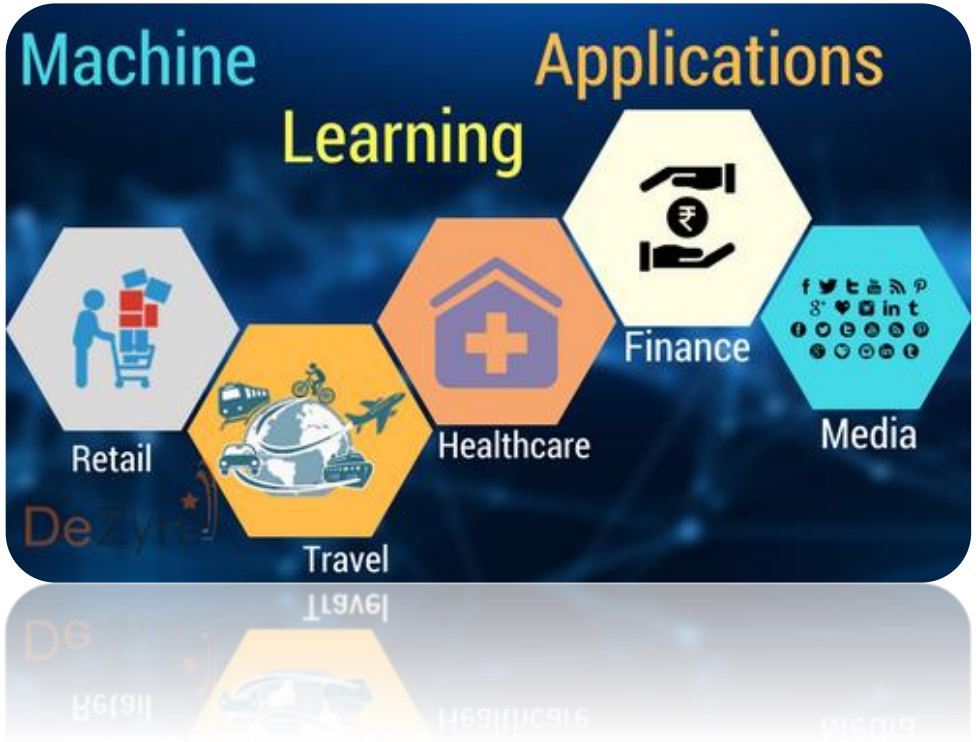
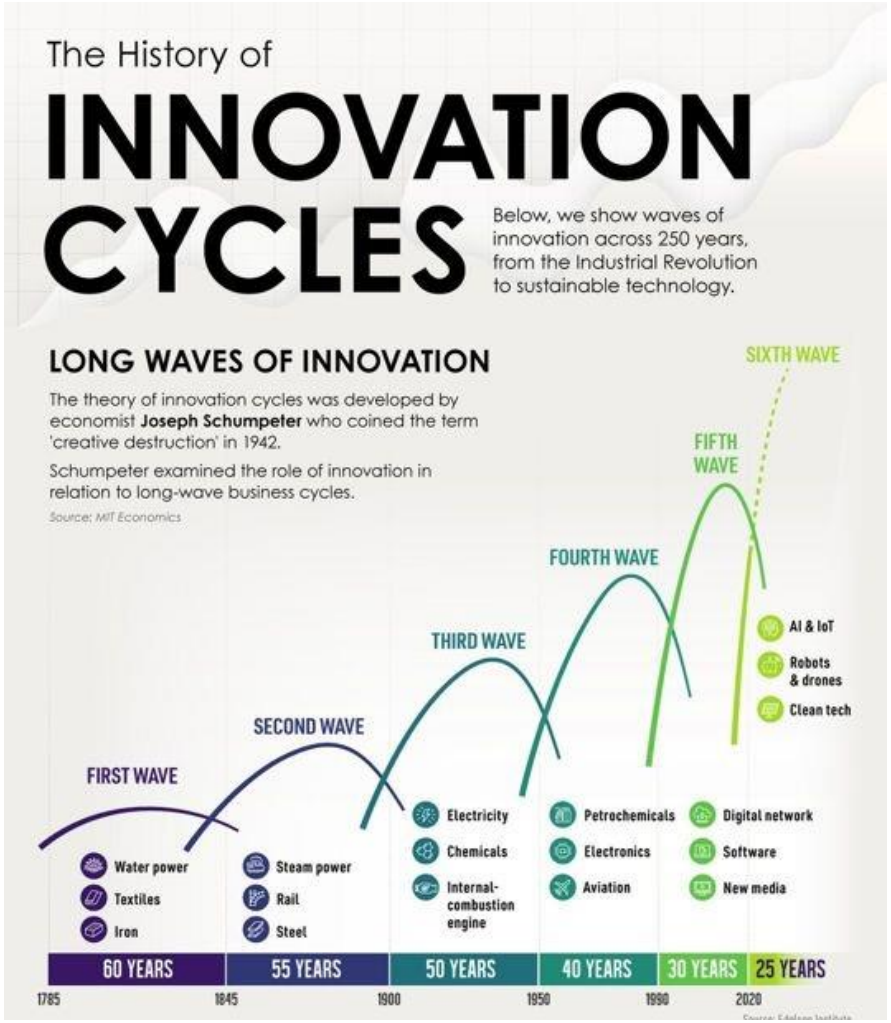
Learn more about TipRanks Smart Score
The Apple stock analysis is based on the TipRanks Smart Score which is derived from 8 unique data sets including Analyst recommendations, Crowd Wisdom, Hedge Fund Activity, Media Sentiment and multiple Technical stock factors. The Smart Score is a quantitative, data-driven rating system and does not include human intervention.
Top Smart Score Stocks >

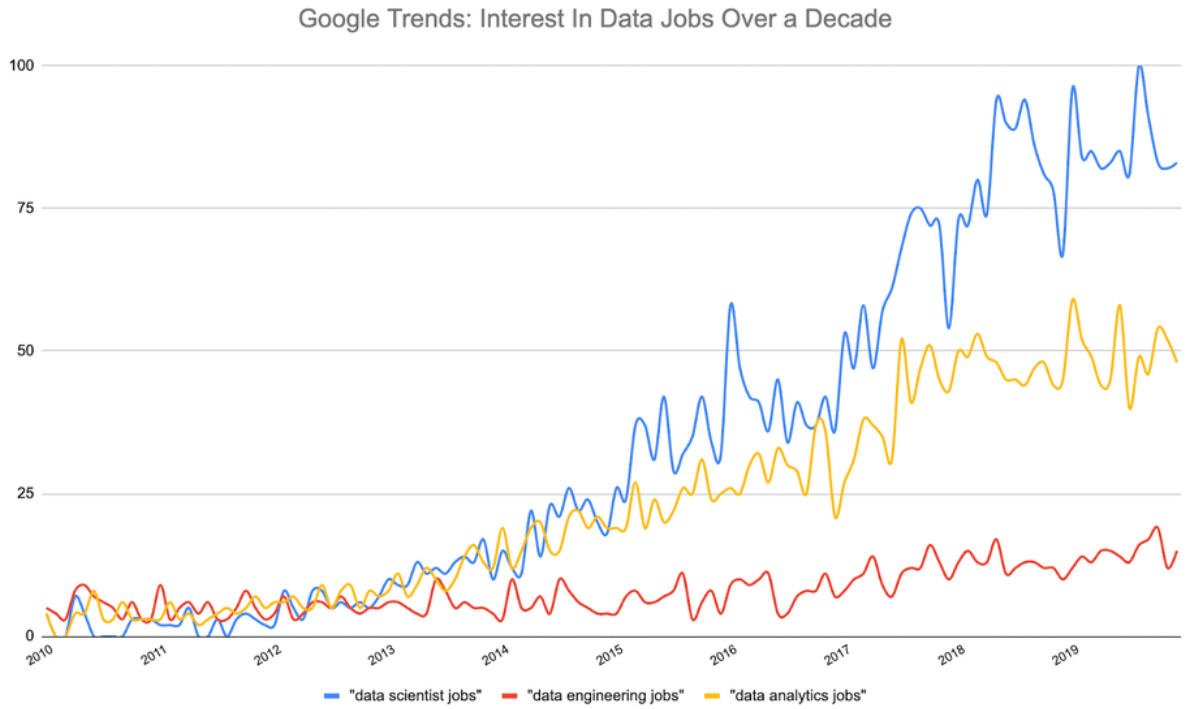
Why should I learn it?

- It’s a bid deal
- ML is closely linked to data science
- Better Career Opportunities
- Better salaries
- Hedge against next recession

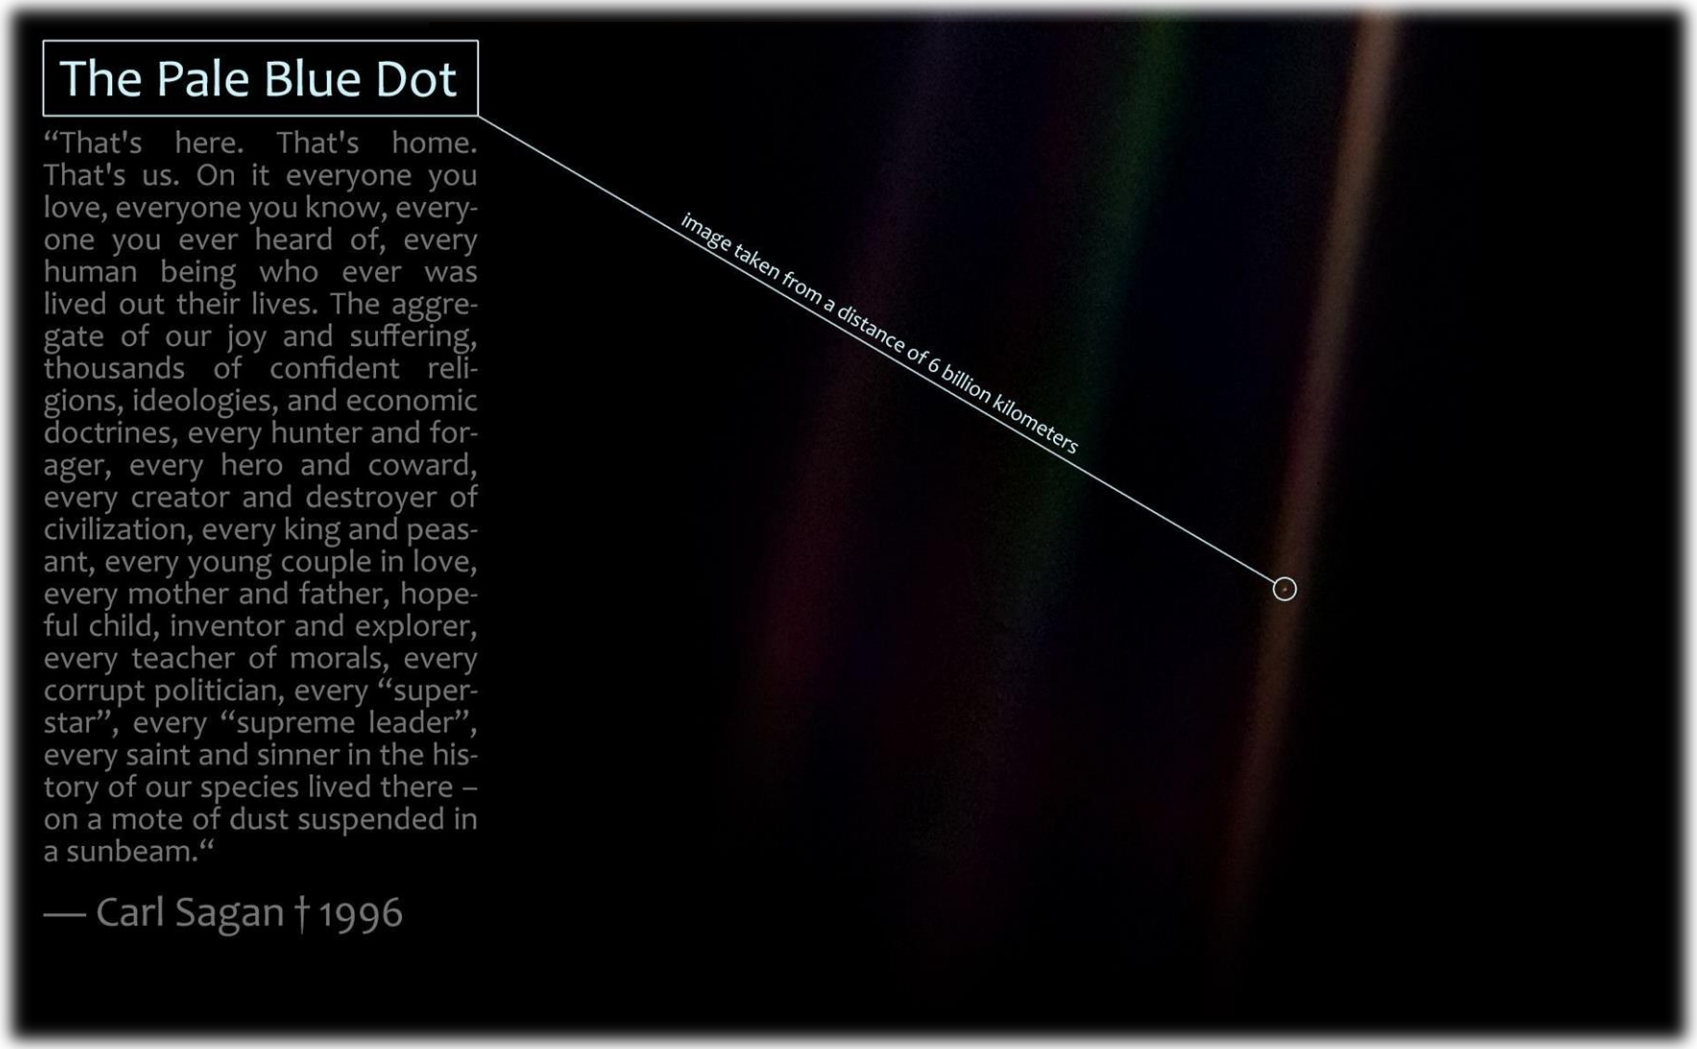


Why should I learn it?





What matters most?



You will be surprised to see what you can do when someone is counting on you!

I am counting on YOU
